

Install WSL2 on Windows 10

Microsoft tutorial is very simple and clean.

seems to the best choice for X-Server in Windows

multiwindow -clipboard -wgl -dpi auto

it on a Windows Shell with Admin Priv)

netstat -abno|findstr 6000

Install Terminator in Bash

The process of installing is very simple(next, next, and finish).

Open Ubuntu and install terminator using the following command:

Install X-Server on Windows 10

Using the following link <u>here</u> install the WSL 2 on your Windows 10. The Now with WSL 2 installed, we can download and install VcXsrv. In my opinion, After installation, create a new desktop shortcut and use the following command. Add the following command in the properties → shortcut →target "C:\Program Files\VcXsrv\vcxsrv.exe" :0 -ac -terminate -lesspointer -Execute the shortcut and use the below command in prompt to verify it. (execute

Database Server

sudo apt-get update sudo apt-get install terminator With the X-Server running execute the following command, to validate the terminator: DISPLAY=\$(cat /etc/resolv.conf | grep nameserver | awk '{print \$2}'):0 terminator & If you see the **terminator** window, then we are successful with the initial setup. But to launch a window first we need to run X-Server then open a Ubuntu window and launch terminator using a command. This all seems too much for launching a terminal. So in the next section, we will see how to automate these steps. **Add X-Server to Startup Program** Using Window(KEY) + R, execute the following command: shell:startup Copy the shortcut created above to init the X-Server inside of this folder. **VBS** script to start Terminator Create a folder in your Windows home directory and create the following file: startTerminator.vbs Content: args = "-c" & " -l " & """DISPLAY=\$(cat /etc/resolv.conf | grep nameserver | awk '{print \$2}'):0 terminator""" WScript.CreateObject("Shell.Application").ShellExecute "bash", args, "", "open", 0 Create a new shortcut with the following command: C:\Windows\System32\wscript.exe C:\Users\ <YOUR_USER>\linux\terminator\startTerminator.vbs You can find and download a nice icon from here. **Extra: Limiting memory to WSL2** Create a .wslconfig file inside of directory: %UserProfile% Content: [wsl2] memory=5GB swap=0 localhostForwarding=true My last recommendations • Install <u>ASDF</u> • Install Visual Code • Install <u>Docker</u> I hope I help you and stay tuned for more technical/architecture articles.
